KISS-CUT UPGRADE

Uniplate trim free acrylic number plates

S.A. PAT. APP. NO. 2004/5431

This new generation patented upgrade jig, attached to our standard Kiss-Cut equipment turns this 20th Century machine into one for this new millennium.

Once again **UniPlate** leads the number plate industry. This new technology for acrylic number plate assembly is very cost effective.

SAVES TIME

SAVES MONEY

IMPROVES QUALITY

YOUR PARTNER - THE NAME FOR TECHNICAL KNOW-HOW IN THE NUMBER PLATE INDUSTRY

Use our standard Kiss-Cut equipment in the normal manner.

1. Insert dies in the sequence required.
2. Place the blank on the dies and roll through the nip rollers.
3. Weed excess Kiss-Cut film from the blank.
4. Fold back 25mm of the liner on our TRIM FREE reflective panel which has rounded corners.

Slide the paired blank face down into the underside of the jig. Place the TRIM FREE reflective panel into the top location of the jig. The jig centrally locates both blank and reflective panel.

Press the reflective panel onto the blanks rear surface, on the leading edge only. Ensure that you attach the panel all across the edge before removing from the jig.

Remove both blank and panel from the jig by sliding them to the right or lifting the hinged jig. Roll the panel onto the blank in the normal manner.

The finished product needs no further trimming or rolling, saving time, money and improving quality.
